(54) Title: PACKAGING FOR FOODSTUFF COMPRISING A DISPLACEABLE BOTTOM BODY OR LID PART

(57) Abstract: The invention relates to a packaging for foodstuffs, comprising: a receptacle (10) having a displaceable part (16) which forms part of the bottom, the body part or the lid, which part is connected to the remaining peripheral part (16) of respectively the bottom, the body part or the lid by an elastically deformable coupling edge (17), such that the displaceable part is movable between a first position displaced to the outside and a second position displaced to the inside. The packaging has the feature that the displaceable part has a generally rectangular shape corresponding with the shape of said remaining part of the bottom, the body or the lid; the surface area of the displaceable part amounts to at least 50% of the total surface area of the bottom, the body or the lid; the displaceable part has bending stiffness.
